

AI Buyers Are Coming. Merchants Aren't Ready.

Traditional stores are built for humans — not autonomous buyers.

The Gap

The Problem

AI cannot reliably understand merchant catalogs

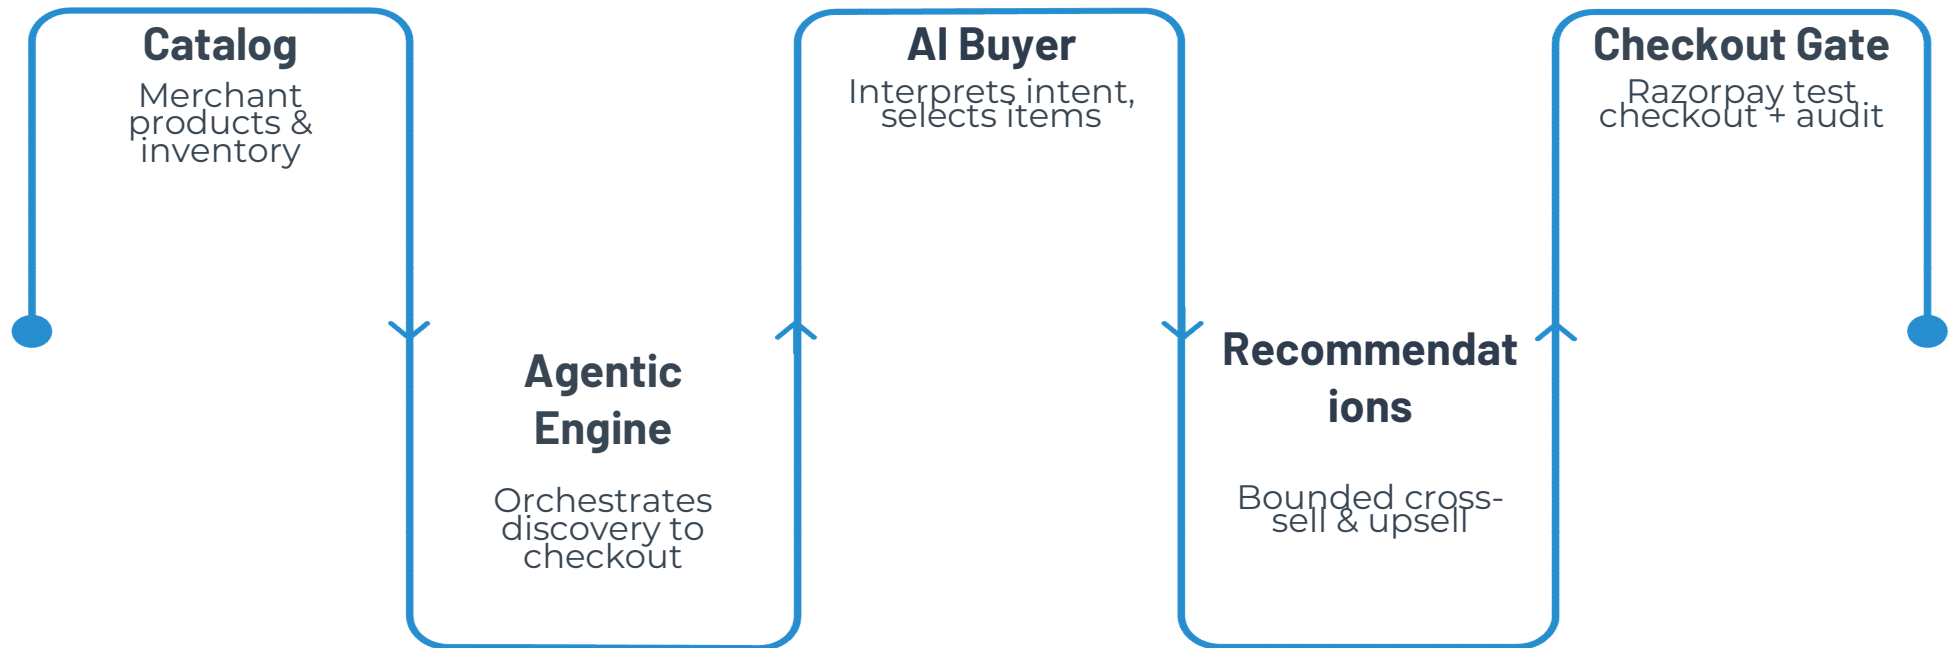

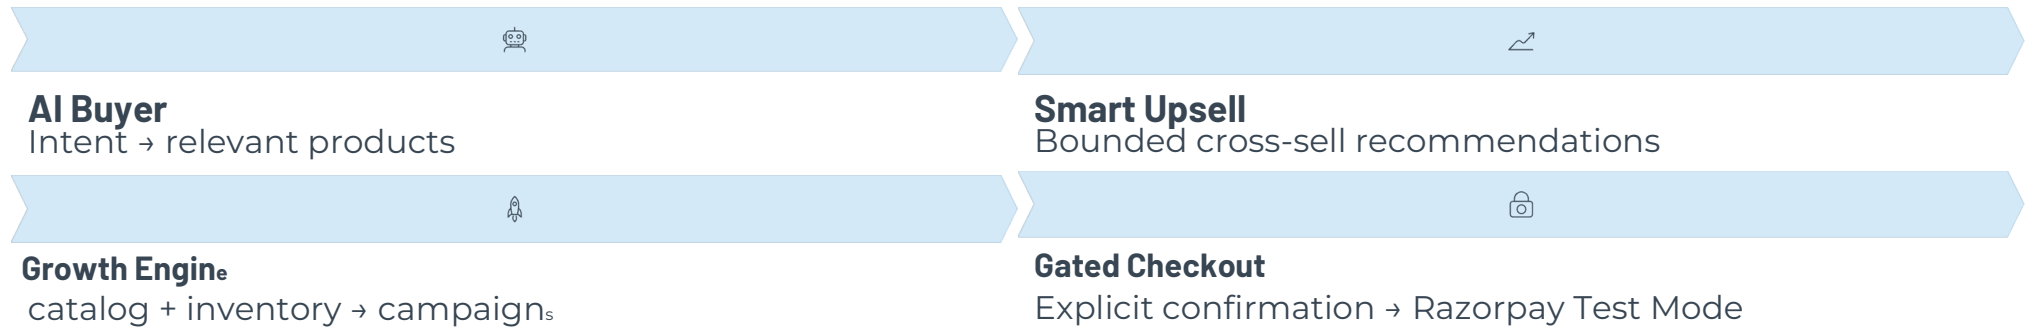

Recommendations often stop before transaction

Money actions need trust, limits and explicit consent

📄 Track 01: make merchants AI-buyable while growing revenue.

Meet Agentic Commerce

One agentic layer from product discovery to gated payment.

Q AI BUYER

Understands Intent – Not Just Keywords

User: "I need headphones under ₹10,000"

Agent: "Here are relevant options within your budget."

How It Works

Intent-aware product discovery

Category + tag + budget matching

Relevant upsell / cross-sell

Demo Catalog

18

SKUs

across 6 categories

 Laptops

 Monitors

 Audio

 Tablets

 Accessories

 Networking

Every Money Action Is Bounded & Gated

🔒 Prevents accidental or mismatched transactions.

Safety Principles

✓ **Exact amount shown before confirmation**

✓ **Explicit user confirmation required**

✓ **Test Mode by default – no real charges**

✓ **INR → paise conversion verified at API boundary**

📘 Cart ₹10,498 → Razorpay API 1,049,800 paise → Payment Page ₹10,498.00

Don't Just Sell – Continuously Find Growth Opportunities

Growth Campaign Orchestrator powered by catalog, ratings and inventory.

Campaign Capabilities

Low-stock product awareness

Anchor + accessory bundles

Bounded discount recommendations

Campaign Lifecycle

- 1 Discover
- 2 Recommend
- 3 Upsell
- 4 Convert
- 5 Learn

 LIVE PROTOTYPE

From Prototype to AI-Ready Merchant Infrastructure

What's Built

✓ AI-readable catalog +
intent-aware
recommendations

✓ Upsell / cross-sell +
campaign generation

✓ Gated Razorpay Test
checkout + audit trail

✓ Graceful failure
handling

Tech Stack

React + Vite • FastAPI • Razorpay Test APIs • Docker • Render
